

# Modeling the Remote Associates Test

Jule Schatz, Steven J. Jones, John E. Laird

# Motivation

Codenames (last year)

How do humans do this task?

# The Remote Associates Test (RAT)

Simple word association task that has been researched with humans

Mednick, S. (1962). The associative basis of the creative process. *Psychological Review*, 69(3), 220-232.

# The Remote Associates Test (RAT)

Simple word association task that has been researched with humans

Swiss

Cake

Cottage

Mednick, S. (1962). The associative basis of the creative process. *Psychological Review*, 69(3), 220-232.

# The Remote Associates Test (RAT)

Simple word association task that has been researched with humans

Swiss

Cake

Cottage

cheese

Mednick, S. (1962). The associative basis of the creative process.  
*Psychological Review*, 69(3), 220-232.

# The Remote Associates Test (RAT)

Simple word association task that has been researched with humans

Swiss	Cake	Cottage	cheese
man	glue	star	

Mednick, S. (1962). The associative basis of the creative process. *Psychological Review*, 69(3), 220-232.

# The Remote Associates Test (RAT)

Simple word association task that has been researched with humans

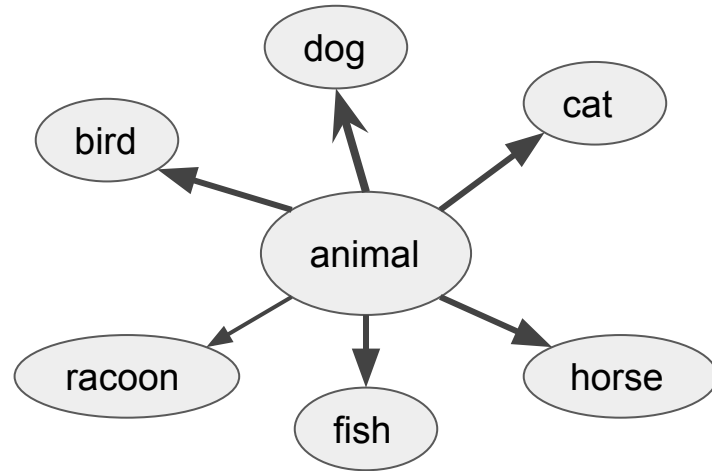

Swiss	Cake	Cottage	cheese
man	glue	star	super

Mednick, S. (1962). The associative basis of the creative process.  
*Psychological Review*, 69(3), 220-232.

# Related Work

Oltețeanu and Falomir created comRAT-C

- Used Bowden and Beeman's 144 compound RAT problems
- Created a database of 2-grams and compound words
- Showed results in terms of correlation between human data and English corpora data

Oltețeanu, A.-M., & Falomir, Z. (2015). Comrat-c - a computational compound remote associates test solver based on language data and its comparison to human performance. *Pattern Recognition Letters*, 67, 81–90.

# Human Brain Cloud (HBC) Knowledge Base

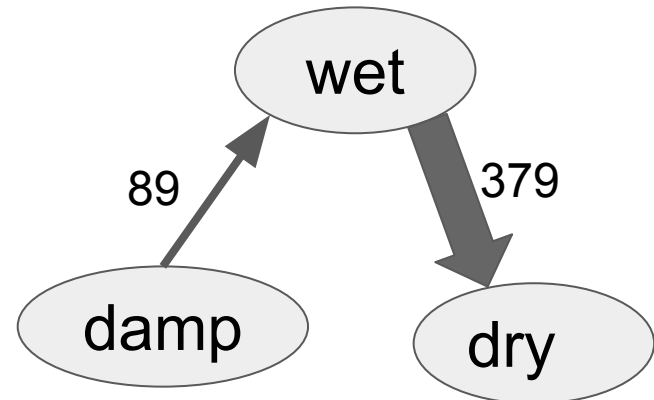

Number of words: 40,652

Number of Associations: 1,298,831

## Data from HBC

word1	word2	Association count
wet	dry	379
damp	wet	89

## Semantic Memory

# Soar Models

## **Non-Cued Retrieval Model**

Relies on spreading activation

## **Cued Retrieval Model**

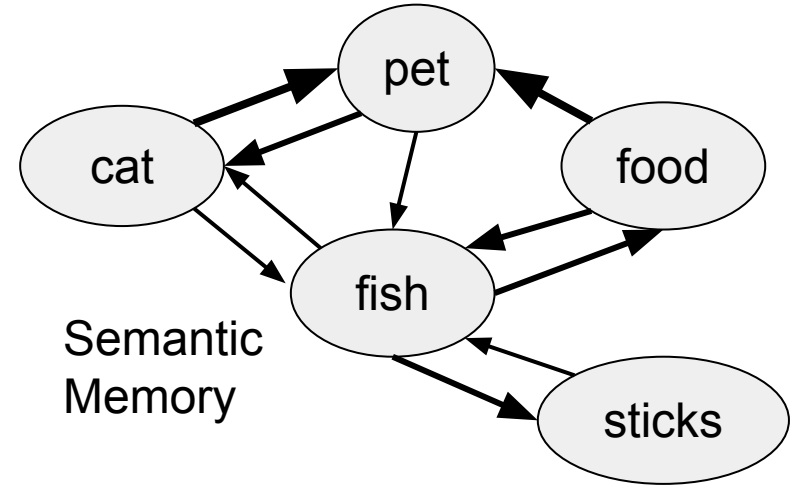

Relies on data available in semantic memory

# Non-Cued Retrieval Model

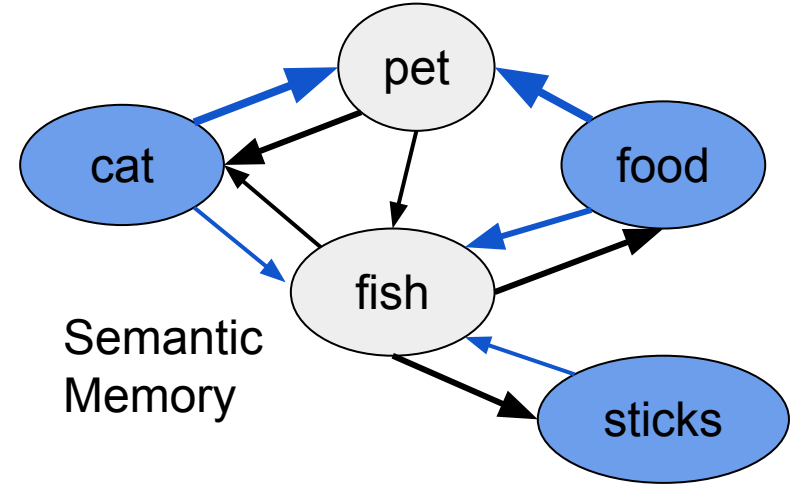

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”

# Non-Cued Retrieval Model

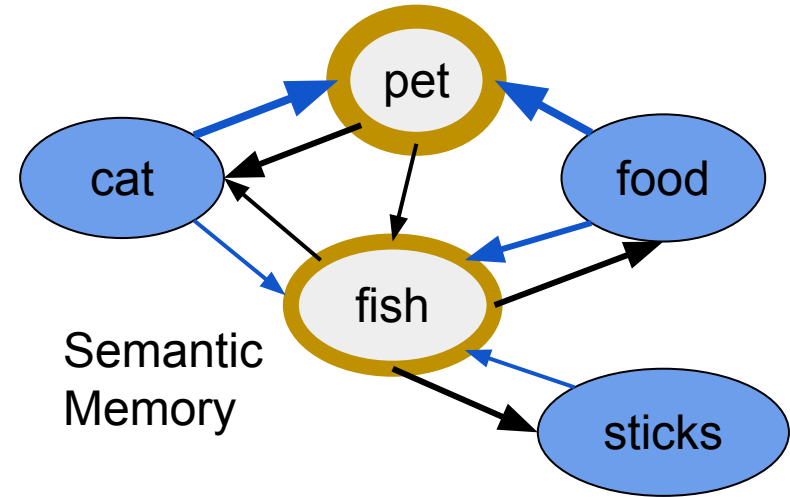

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

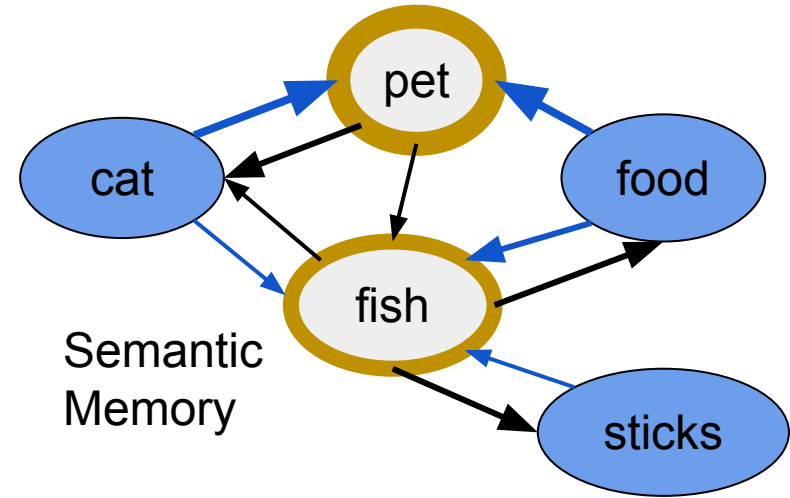

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words
5. Model asks for a word
  - a. Receives “fish”

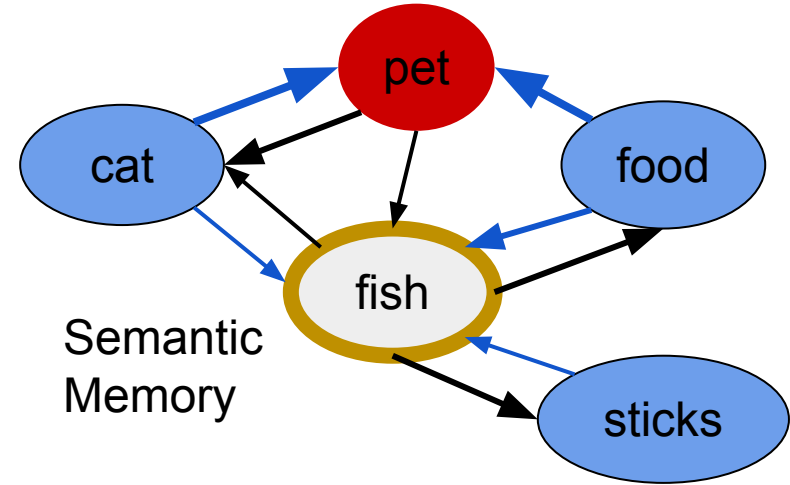

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words
5. Model asks for a word
  - a. Receives “fish”
6. Evaluates “fish” as relating to 3 words

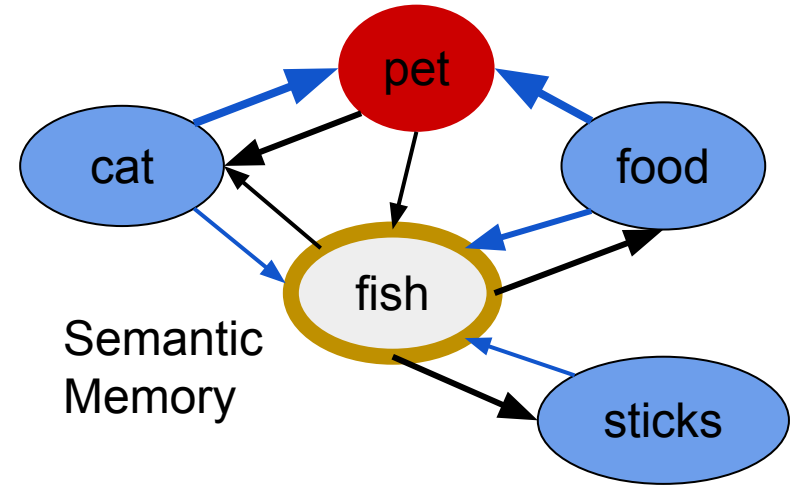

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words
5. Model asks for a word
  - a. Receives “fish”
6. Evaluates “fish” as relating to 3 words
7. Returns fish

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words
5. Model asks for a word
  - a. Receives “fish”
6. Evaluates “fish” as relating to 3 words
7. Returns fish

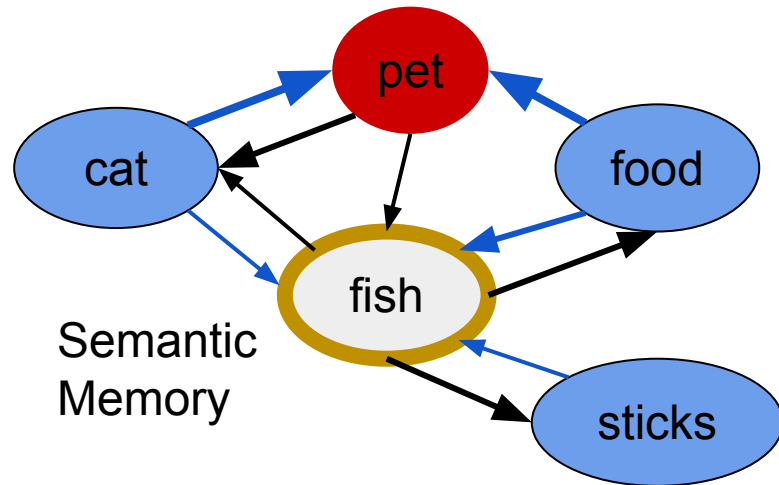

Attempt 1

Attempt 2

# Non-Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word
  - a. Receives “Pet”
4. Evaluates “Pet” as relating to 2 words
5. Model asks for a word
  - a. Receives “fish”
6. Evaluates “fish” as relating to 3 words
7. Returns fish

**Relies on  
association  
strength and fan!**

# Cued Retrieval Model

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. Receives “fish”

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. Receives “fish”
4. Model returns “fish”

# Cued Retrieval Model

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory

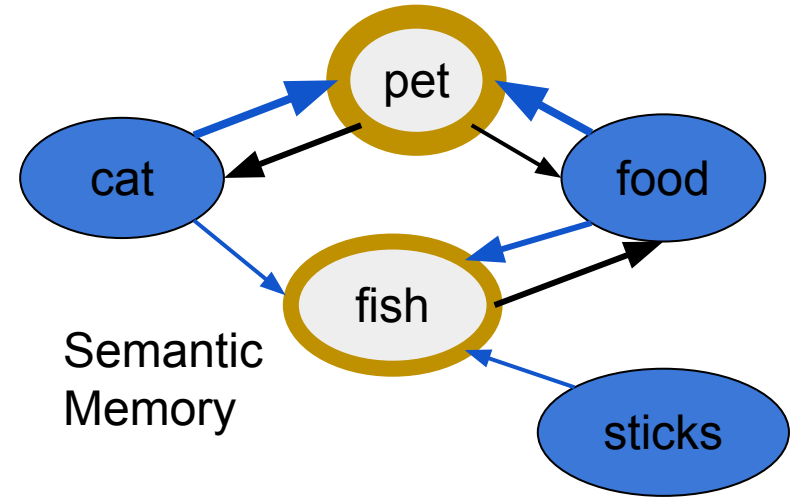

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. FAIL

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. FAIL
4. Model asks for a word that is associated with 2 given RAT items

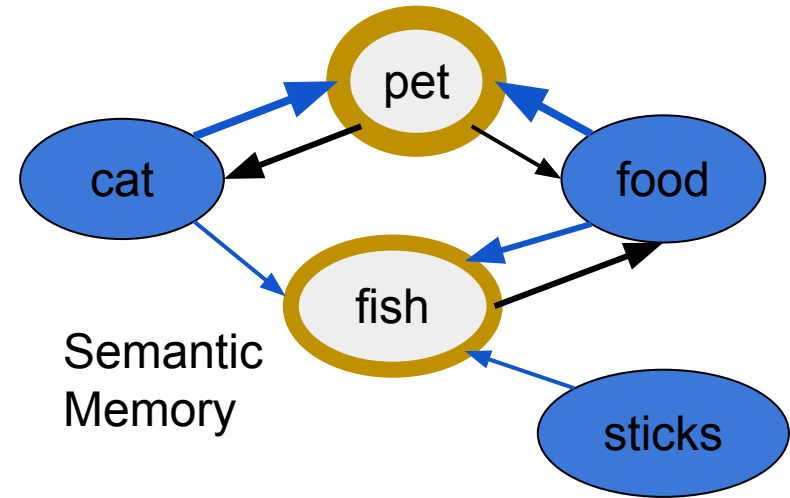

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. FAIL
4. Model asks for a word that is associated with 2 given RAT items
  - a. Receives “pet”

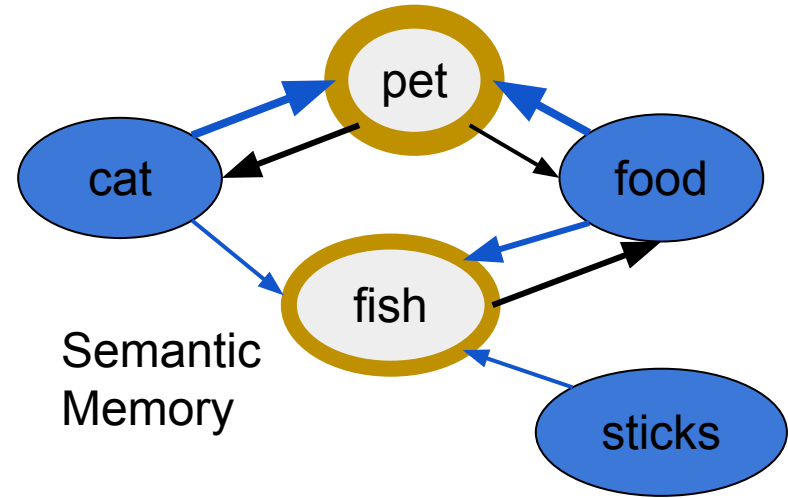

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. FAIL
4. Model asks for a word that is associated with 2 given RAT items
  - a. Receives “pet”
5. Model returns “pet”

# Cued Retrieval Model

1. Model is given RAT items “cat”, “food”, “sticks”
2. Model retrieves the words from semantic memory
3. Model asks for a word that is associated with all 3 given RAT items
  - a. FAIL
4. Model asks for a word that is associated with 2 given RAT items
  - a. Receives “pet”
5. Model returns “pet”

Relies on data in  
semantic Memory

# Hypothesis

## **Non-Cued Retrieval Model**

Correlate better with human data

## **Cued Retrieval Model**

Get more RAT questions correct

# Results Using HBC Knowledge Base

	<b>RAT questions correct (out of 144)</b>
<b>Non-Cued Retrieval model</b>	21-71
<b>Cued Retrieval model</b>	70
<b>Humans given 15 seconds</b>	44

RAT questions correct using the Non-Cued Retrieval Model and the HBC database

# Results Using HBC Knowledge Base

	<b>RAT questions correct (out of 144)</b>
<b>Non-Cued Retrieval model</b>	21-71
<b>Cued Retrieval model</b>	70
<b>Humans given 15 seconds</b>	44

# Results Using HBC Knowledge Base

	RAT questions correct (out of 144)
Non-Cued Retrieval model	21-71
Cued Retrieval model	70
Humans given 15 seconds	44

# Results Using HBC Knowledge Base

	<b>RAT questions correct (out of 144)</b>
<b>Non-Cued Retrieval model</b>	21-71
<b>Cued Retrieval model</b>	70
<b>Humans given 15 seconds</b>	44

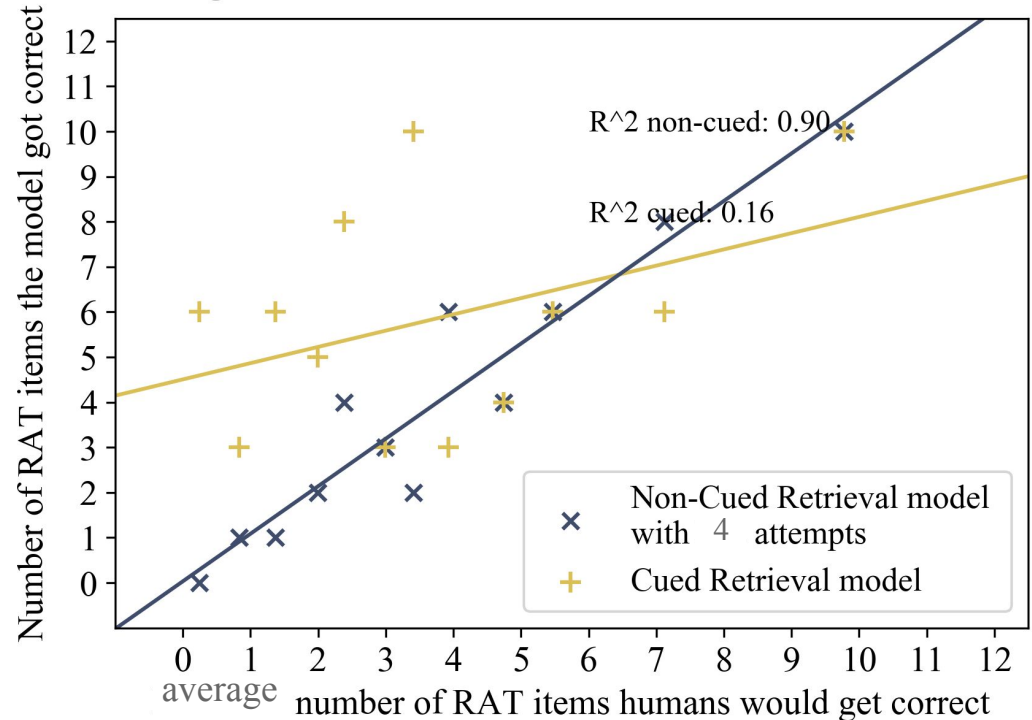

# Difficulty Comparison

- 144 questions into 12 bins based on human % correct
- Compared each bin with model correctness

# Difficulty Comparison

- 144 questions into 12 bins based on human % correct
- Compared each bin with model correctness

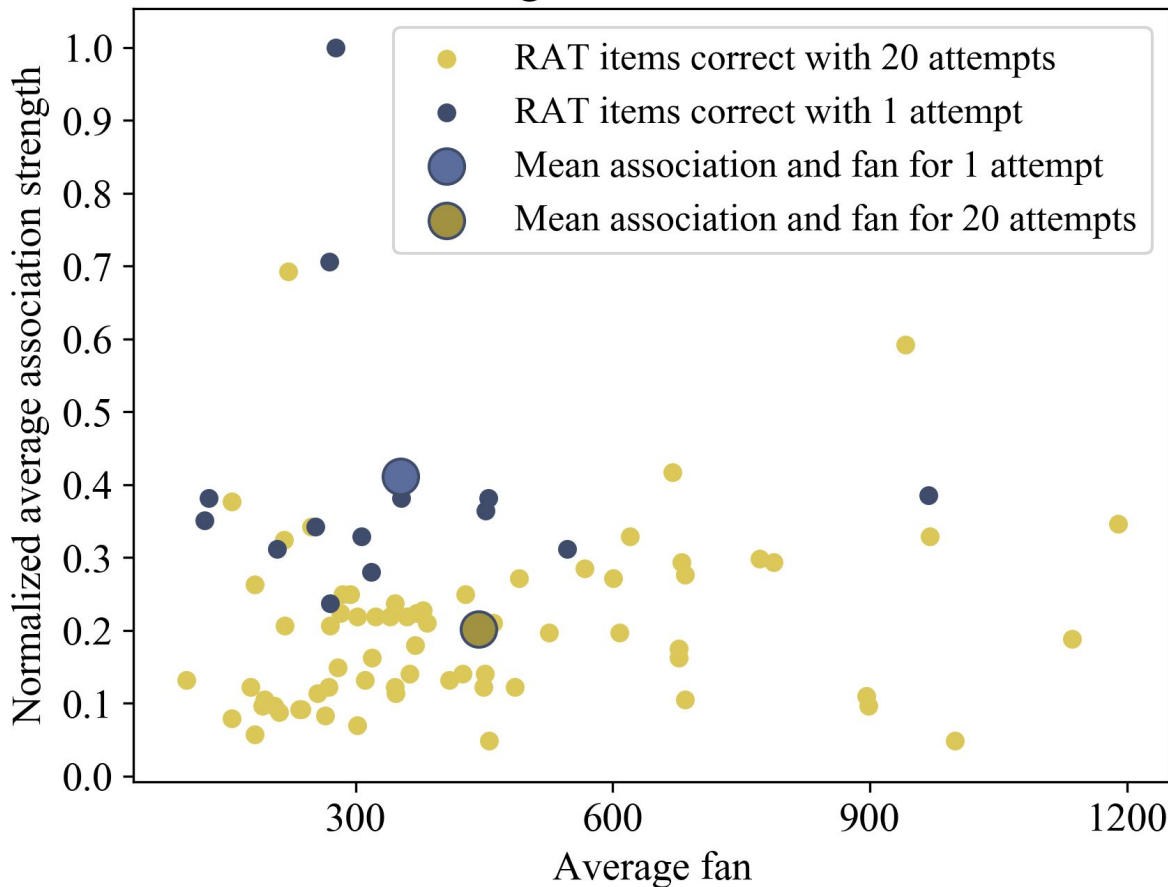

Comparing models with binned human difficulty data.  
Using the HBC database and 15-second human data

# Fan and Association Strength

- Focused on questions that the model could answer correctly
  - 20 attempts (hard)
  - 1 attempt (easy)

Fan vs. association strength for the Non-Cued Retrieval model

# Fan and Association Strength

- Focused on questions that the model could answer correctly
  - 20 attempts (hard)
  - 1 attempt (easy)

# Fan and Association Strength

- Focused on questions that the model could answer correctly
  - 20 attempts (hard)
  - 1 attempt (easy)

# Summary

- Created a database of word associations, HBC
- Created two models in Soar
  - Non-Cued Retrieval model
  - Cued Retrieval model
- Compared models to human performance
- Knowledge base needs to be tweaked
- New knowledge bases
- More analysis on fan and association strength influences

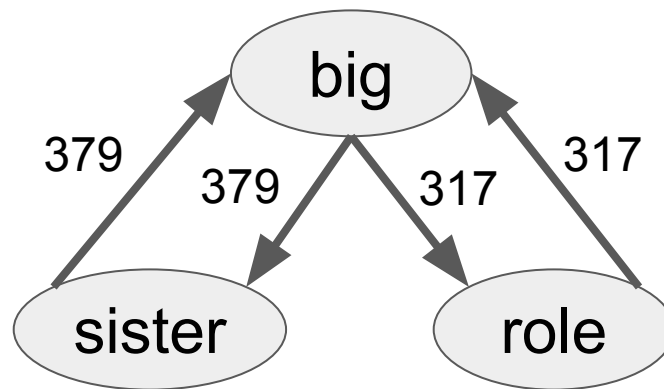

# COCA-TG Knowledge Base

- Recreated from Oltețeanu and Falmoir's work
- Only compound words and bigrams, taken from COCA\*

## Data from \*COCA

word1	word2	frequency
big	sister	379
big	role	317

## Semantic Memory

\*COCA- Corpus of Contemporary American English

	<b>HBC</b>	<b>COCA-TG</b>
Number of Words	40,652	20,809
Number of Associations	1,298,831	349,196

## RAT questions correct with the COCA-TG database
